The Universidad del Rosario has been consistently ranked among the top five Colombian universities in the last three evaluations conducted by ScImago. This classification is based on the quantity and quality of scientific works published on the Scopus platform. This is the result of work that began 20 years ago, during which time 1,707 documents have been published. The goal is to double this number in 2020.
HOW SCIMAGO RANKS INSTITUTIONS

*The SCImago ranking is an annual measurement conducted by the SCImago LAB research group. The classification is made of universities and scientific institutions worldwide in order to construct tables that reflect the research, innovations, and social impact generated by institutions. It takes Scopus data as its basis. The scientific journals analyzed in the ranking are divided into four quartiles (Q1, Q2, Q3 and Q4) based on their circulation, the amount they are consulted, and their citations by the academic community.

United Kingdom

- Annals of the Rheumatic Diseases
- Journal of Infectious Diseases
- Malaria Journal
- Molecular Ecology
- Genes and Immunity
- Lupus

Netherlands

- Autoimmunity Reviews
- Energy Economics
- Infection, Genetics and Evolution
- Vaccine
- Acta Tropica
- Economics Letters
- Gene

Israel

- Israel Medical Association Journal

Egypt

- Autoimmune Diseases

15% of UR publications are in Q1 journals based on SCImago ranking.

41% of UR publications are in high impact journals.
